ARGER DESIGN

STRATA

Collection catalogue

ORIGINAL DESIGN BY DENIS ARGER

ENGLISH EDITION / 2026

FURNITURE BY DENIS ARGER

A landscape for living

STRATA brings the softness of gathered upholstery into dialogue with sculptural, rock-like foundations. Light moves across folds, edges and irregular surfaces, revealing a collection defined as much by its silhouette as by its texture.

The collection extends from the personal scale of a chaise longue to the bedroom and the dining room. Low upholstered volumes, generous headboards and expressive supports create a shared visual language without making every object identical.

This catalogue brings together the collection imagery, the recent detail studies and the furniture visible in the ensembles. An illustrated dimensions section distinguishes confirmed information from provisional design-review geometry.

EXPLORE

Lounge and chaise 03 / Bedroom 08 / Dining 10
Surface and detail 16 / Dimensions 22 / Studio 40

Softness, shaped by time.

THE CHAISE LONGUE

A line of repose

A rising back flows into a long, gently curved seat. The gathered upholstery gives the silhouette a supple rhythm; the irregular foundation keeps it visually grounded. A slender side table accompanies the reclining form without competing with it.

A moment of stillness

The chaise becomes a place to read, pause or simply inhabit the room.

THE COLLECTION IN THE ROOM

A world of STRATA

The lounge, bedroom and dining compositions share a language of gathered surfaces and expressive foundations. Together, they establish a connected interior landscape.

THE LOUNGE SOFA

A low horizon

A broader upholstered lounge composition rests on an expressive sculptural base. Generous horizontal cushions contrast with the irregular support below. The low profile preserves long sightlines, while the extended side surface frames a lamp and everyday objects.

Room to linger

The lounge composition carries the same vocabulary of folds and sculptural mass into a more generous setting. Its portrait view reveals the breadth of the seat and the relationship between upholstery, support and light.

THE BEDROOM

An enveloping composition

The bed is framed by a broad, softly pleated headboard with turned side wings. A low upholstered platform and rounded supports keep the composition grounded. Bedside tables, lamps and a compact bedroom bench extend the room’s sculptural language.

THE BEDROOM ENSEMBLE

A coherent private world

Bed

A wide, segmented upholstered headboard frames the sleeping area. The confirmed mattress reference is 2000 × 2000 mm; the overall envelope remains provisional.

Bedroom bench

A compact upholstered piece with a transverse end bolster and irregular sculptural base. The current P03 design-review drawing supersedes the earlier bench study.

Bedside tables

Thin, circular, reflective tops sit above irregular sculptural pedestals. Their restrained profiles balance the scale of the upholstered headboard.

Bedroom lighting

Pleated shades echo the gathered surfaces nearby. The tall lamp and bedside lamps are shown as part of the ensemble; electrical specifications and final sizes require studio confirmation.

THE DINING ROOM

The art of gathering

A broad dining table and upholstered chairs bring the collection into a shared setting. The table’s expressive support anchors the room. A pleated-front sideboard, tall display cabinet and circular mirror complete the composition with contrasting scales and surfaces.

Gathered around form

Upholstered chairs soften the dining setting. Vertical folds reappear on the sideboard, while a circular mirror introduces a quiet geometric counterpoint.

Wall and pendant lighting studies are shown within the interior compositions. Final product scope, finishes and lighting specifications are agreed with the studio.

THE COLLECTION VOCABULARY

Objects in conversation

Dining table and chair

A substantial top and sculptural support pair with soft, fully upholstered seating. The chair’s gathered surfaces connect the dining ensemble to the lounge and bedroom.

Sideboard and display cabinet

Low storage with a folded front is paired with a tall reflective display volume. Their proportions create a balance between horizontal and vertical elements.

Mirror and occasional tables

The circular mirror and thin-topped side tables introduce simple outlines against the textured furniture. Reflective surfaces offer a visual pause between upholstered and sculptural forms.

A broader invitation

The front view makes the lounge composition’s generous horizontal span clear, with rounded cushions above a rough-edged sculptural foundation.

Soft continuity

The continuous upholstered profile brings the collection’s gathered surface to the back, seat and lower volume of the chair.

DETAIL VIEW

A PLACE FOR EVERYDAY OBJECTS

An extended composition

The integrated end surface and pleated-shade lamp complete the lounge arrangement. Final material and lighting specifications are confirmed with the studio.

SCULPTURAL SUPPORT

Irregular by design

The chaise support is pictured as an eroded, rock-like form. Its tonal variation and broken outline provide a counterpoint to the smooth upholstery above.

AI-generated detail study.
Visual intent only; not a construction or material certification.

THE OCCASIONAL TABLE

A fine edge

A textured, metallic-looking rim meets slender supports. The image explores the contrast between an irregular perimeter and a precise vertical line.

AI-generated detail study.
Visual intent only; not a construction or material certification.

THE HEADBOARD

Light in the folds

Closely gathered vertical folds give the headboard a deep, soft surface. The horizontal division between padded sections introduces a calmer architectural line.

AI-generated detail study.
Visual intent only; not a construction or material certification.

THE BED SUPPORT

A quiet foundation

A rounded cylindrical support sits beneath the gathered bed platform. The image describes a visual relationship between the soft edge and the darker metallic-looking base.

AI-generated detail study.
Visual intent only; not a construction or material certification.

THE BEDSIDE TABLE

A suspended circle

The thin circular top is pictured above a rugged pedestal. Its reflective surface catches the upholstered surroundings, linking the table to the bedroom composition.

AI-generated detail study.
Visual intent only; not a construction or material certification.

FINISHES AND SPECIFICATION

The material conversation

The images establish a direction, not a fixed material schedule.

Upholstery

Gathered and pleated surfaces are presented in warm ivory tones. The studio can discuss leather, textile and fur or shearling directions; availability and suitability must be confirmed with physical samples.

Sculptural foundations

The visual studies show warm, bronze-toned or metallic-looking supports. Substrate, alloy, casting process, finish durability and construction are not established by these images.

Tops and reflective surfaces

Thin tabletops, a reflective bedside surface and a circular mirror introduce a lighter visual register. Exact glass, stone, metal or veneer specifications are confirmed per order.

Before ordering, request the final finish schedule, approved dimensions, upholstery specification, care guidance, lead time and installation requirements from the studio.

Collection imagery comprises studio visualizations and AI-generated detail studies. Product category names describe the pictured designs; they are not manufacturing model numbers.

DESIGN REVIEW INFORMATION

Reading the drawings

Dimensions are in millimetres.

The mattress reference of 2000 × 2000 mm is confirmed. Other numeric dimensions reproduced in this catalogue are taken from provisional design-review models, not approved manufacturing documentation.

Model-derived envelopes are identified as provisional. Unresolved sizes are marked TBC rather than estimated from photographs. Schematic outlines describe the object and the dimensions to be confirmed; they are not measured technical projections.

NOT FOR MANUFACTURE

Do not use these pages for fabrication, procurement clearances or installation. Obtain an approved, item-specific dimensional drawing from the studio before placing an order.
